Since 1980, Braillo has supported Braille literacy and has provided comprehensive solutions for the development of Braille production facilities across the world.

BRAILLO ●
True Production Braille, Quality You Can Trust

We regularly conduct Braille production workshops where regional organizations join forces to produce excellent quality Braille easier and more effectively.

We also offer thorough instruction and training – from simple operation and service courses, to complete Braille production center management. While producing high quality Braille embosser is our focus, the importance of tactile graphics is also a priority for us. Therefore, we provide tactile graphics equipment from American Thermoform Corporation and Zychem, as well as the finest Braille paper available.

For decades, Braillo has been the market leader in the production Braille embosser segment; the embosser construction and its Braille quality are simply unmatched. The goal of Braillo is simple: to provide the highest quality production Braille embosser and supplies on the market to help ensure blind individuals have access to great Braille – all while offering outstanding service and support.

BRAILLO ● S2 Series
