www.altix.pl

The ALTIX company, founded on the initiative of blind IT specialists, has been on the market since 1989 . We are the largest company in Poland dealing in the distribution of electronic equipment for invalids of sight.

In Poland, it was us who created the foundations of typhloinformatics, or computer science for the blind . Our goal is to create such solutions that our clients are fully independent and successful.

Altix is a company strongly associated with the environment of people with visual dysfunction. As the first in Poland, we created this industry, IT for the blind, or typhloinformatics. From the very beginning, apart from promoting IT solutions for the blind, the company has been conducting and continuing various social activities for this environment. Due to its specificity (employing 40% of disabled people), the company was strongly socially involved in helping the environment.
